PRESS RELEASE 25.10.2003

(To accompany interactive DVD presentation)

Friends, colleagues and members of the press – May we welcome you here to I.F.F.E's central laboratory, and our first ever public demonstration of the possibilities and realities of force field technology?

At precisely 2p.m., an invisible force field will be activated creating an impenetrable barrier round the ArtSway centre. This barrier, although imperceptible, will frustrate all attempts to enter or leave the area, and will be operational for exactly two hours, proving its strength and sustainability.

This demonstration is the result of months of rigorous scientific investigation; groundbreaking experimentation and a single-minded determination to create the world's first partial ionisation charged static sheath vortex force field.

As some of you will be aware, during this lengthy period of research I.F.F.E. has had many detractors. They have included those stifled in their own scientific orthodoxy, and scurrilous rumour mongers who have attacked the integrity of the project out of professional jealousy. Although the criticism has been harsh, I.F.F.E. has rallied against the forces of scientific conservatism and establishment un-truths to achieve what many people claimed to be the un-achievable.

Today, the 25th of October 2003, will finally silence these critics in the most indisputable and powerful fashion, for today is a day of vindication, a day of truth, and a day of history.

Finally, it is our sole wish, that this new technology will not merely be owned by the elite, to be used to serve their own interests, but that it is democratically shared throughout the world for the benefit the whole of human kind, and thus we openly offer our knowledge to all of humanity.

Friends, colleagues and members of the press, welcome to the worlds first Invisible Force Field, and welcome to the future – the future is invisible.
